why studying psychology is important: *How Public Schools Destroy Your Children's Lives and Careers* Sandro Sehic, 2010-06 Educating your children in the public schools does not take one minute or perhaps one day. Education is a life-long process and whether we like it or not, the fact is, it never stops. Your children will spend the most important part of their lives at the public schools and whatever they learn at those schools will impact their lives as long as they live. What

really happens to your children at public schools each day? Do you think that your children are learning useful information in today's schools? If you think that your children will leave today's public schools properly prepared for real life, the answer is no, you are WRONG! Public schools have failed. Many teachers are not properly educated with the appropriate teaching certification. School administrators constantly sell lies about the success of their students, when in reality they are failing miserably today. Courses and exams are designed to be very simple so that they no longer test the knowledge of our children properly. The greatest portion of school budgets is spent on the salary of local school administrators. Almost everything your children learn in today's public schools is useless. Teaching positions are no longer designed for the smartest and most qualified teachers; they have become political positions that anyone can hold as long as they get approved by the school board. It's not too late to do something to turn this around! How Public Schools Destroy Your Children's Lives and Careers offers thoughts and solutions on this hot-button topic.

why studying psychology is important: Psychology for Nurses and the Caring Professions Jan Walker, Sheila Payne, Nikki Jarrett, Tim Ley, 2012-05-16 This beautifully written book ... clearly explains the application of psychological concepts and theories to health and succinctly summarises key issues. Each chapter also provides a series of vignettes capturing the kind of real-life situations health and social care professionals will encounter in their own practice and a set of thought-provoking exercises ... These will be invaluable in developing critical thinking skills and growing the capacity to provide the kind of empathic care which is the heart of person-centred practice Dr Wendy Cousins, Course Director, University of Ulster School of Nursing, UK I have recommended earlier editions of this book and now am delighted to say that this latest edition is even better. The authors continue to clearly explain the relevance of psychological theories, models and approaches to nursing care but now, through the use of frequent reflective activities, vignettes and a 'psychosoap' family, students are also highly encouraged to identify how the theory will help them to become the high quality holistic practitioners they desire to be. Anthony Duffy, Nurse Tutor, College of Human and Health Sciences, Swansea University, UK This new edition embraces innovation in student learning. The use of the 'psychosoap' provides a structure which is meaningful and insightful. The chapter exercises have 'realworld' application and can be used to understand your own and others motivations, beliefs and values. Unlike many psychology texts ... this book offers real 'food for thought' and provides the building blocks which link theory to practice. It will also be a valuable resource for those who like to 'dip in' to a book. Philip Larkin, Professor of Clinical Nursing (Palliative Care), and Joint Chair, University College Dublin and Our Lady's Hospice & Care Services, Ireland This new edition continues to improve the reader's experience, providing comprehensive insight into the complex subject of psychology. It is user friendly, underpinned by research findings and will enable the reader to apply its concepts personally and professionally. It is a text which is well designed for student use and application and it has employed a number of innovative features ... An excellent resource, which I would highly recommend.
