Pain is a leading cause of disability globally. The dramatic increase in opioid prescriptions within the past decade in the United States has contributed to the opioid epidemic the country currently faces, magnifying the need for longer term solutions to treat pain. The substantial burden of pain and the ongoing opioid crisis have attracted increased attention in medical and public policy communities, resulting in a revolution in thinking about how pain is managed. This new thinking acknowledges the complexity and biopsychosocial nature of the pain experience and the need for multifaceted pain management approaches with both pharmacological and nonpharmacological therapies. The magnitude and urgency of the twin problems of chronic pain and opioid addiction, combined with the changing landscape of pain management, prompted the National Academies of Sciences, Engineering, and Medicine to convene a workshop on December 4-5, 2018, in Washington, DC. The workshop brought together a diverse group of stakeholders to discuss the current status of nonpharmacological approaches to pain management, gaps, and future directions. This publication summarizes the presentations and discussions from the workshop.

widener university occupational therapy: *The Power of Integrated Learning* William M. Sullivan, 2023-07-03 Students and their parents wonder if college is worth the investment. Employers want graduates with the skills they need. The public wonders if higher education is preparing future generations for an era of dynamic change. In his latest book, William Sullivan offers a model of higher education that answers all these questions in the affirmative, through the power of integrated learning. Drawing on examples from the 25 members of the New American Colleges & Universities (NAC&U) consortium, the book makes the case for an approach that combines the strengths of the liberal arts, professional studies, and civic responsibility in order to give students the combination of skills and experience that will prepare them for success in all aspects of life after graduation. NAC&U campuses place emphasis upon enabling their students to know themselves and their abilities, as well as providing them with opportunities to develop a sophisticated understanding of the world. To achieve these goals, the academic programs focus on developing students' intellectual and practical skills, such as analytical ability, problem solving, facility in written and spoken communication, and an appreciation for human diversity and creativity. These have traditionally been identified as the goals of a liberal arts education, and are the same ones identified in a national employer survey as giving job-seekers an edge. These institutions also invest a great deal of effort to provide their students with state-of-the-art preparation for professional life and occupational success in diverse fields. These range from the technical – science and technology fields, with disciplines such as engineering and computer science – through business, and across the human service fields, such as education, nursing, pre-medicine, and pre-law, to architecture, and the performing and visual arts. In these courses of study, students begin to shape their future careers. The important third value of a NAC&U education is fostering civic responsibility among students. In programs of study abroad and a range of internship and service opportunities, these colleges support their students in shaping for themselves unique and effective ways to contribute to the larger life of their world. Parents and prospective students may appreciate the chance to learn

more about these schools and what they have to offer, while those working in higher education will appreciate the chance to learn more about a model that their own institutions may be motivated to emulate. All readers will take away a picture of a truly vital part of the higher education landscape in this country.

widener university occupational therapy: Philosophy of Science for Nursing Practice, Second Edition Michael D. Dahnke, H. Michael Dreher, 2015-11-04 Written for DNP and PhD nursing programs, this text, based on a unique team-taught philosophy of science nursing courses, distills challenging content and delivers it in clear, highly accessible language for professors untrained in philosophy and their students. Authored by a nurse researcher/philosopher team who developed and taught this course for more than 7 years, the book provides a unique, integrated viewpoint that avoids esoteric and overly theoretical discussions and facilitates a clear connection between the philosophy of science and nursing science and practice. This second edition offers enhanced clarity and encompasses updates in philosophy of science interpretation, nursing practice and science, and a still-emerging practice epistemology. It is distinguished by its increased emphasis on DNP investigation that relies on a fundamental relationship with evidence-based practice, as well as the informational needs of the PhD student and the type of research the PhD graduate is expected to produce. The bulk of the text focuses on basic principles and concepts of the philosophy of science in regard to the education of both DNP and PhD nursing students. The book discusses the concept of nursing as a "practice discipline" within historical and sociological contexts, and addresses the importance of philosophy of science knowledge within a practice discipline. It examines the controversial question of how much philosophy of science a doctoral student actually needs. The text concludes with a brief introduction to nursing science knowledge content that is an essential "bridge" to the philosophy of science content and serves as a "next step" toward building a nursing epistemology. New to the Second Edition: Revised to enhance clarity of information Reflects contemporary trends in doctoral nursing education Updated Questions for Reflection offer scholarly discourse New appendix offers a sample semester-based syllabus based on the second edition Key Features: Provides concise, accessible information that makes clear connections to practical applications Written jointly by a philosopher and a nurse scholar who co-teach the course Facilitates student ability to see the real connection between philosophy and practice Increased focused content on how philosophy of science content is essential to understand evidence-based and practice-based evidence
