

wideo text to speech

wideo text to speech technology has revolutionized the way creators produce engaging video content by converting written text into natural-sounding audio. This innovative tool allows users to transform scripts, articles, or any textual information into spoken words with diverse voice options and languages. The integration of text to speech (TTS) within video platforms like Wideo enhances accessibility, boosts audience engagement, and streamlines the content creation process. As digital communication continues to evolve, understanding the capabilities and applications of wideo text to speech becomes essential for marketers, educators, and content creators alike. This article explores the core features, benefits, and practical uses of wideo text to speech, along with tips for maximizing its effectiveness in various contexts. The following sections provide a detailed overview to guide users through the potential of this powerful technology.

- What Is Wideo Text to Speech?
- Key Features of Wideo Text to Speech Tools
- Benefits of Using Wideo Text to Speech in Video Production
- How to Use Wideo Text to Speech Effectively
- Common Applications of Wideo Text to Speech
- Future Trends in Text to Speech Technology for Video

What Is Wideo Text to Speech?

Wideo text to speech refers to the integration of text-to-speech synthesis within the Wideo platform, a popular online video creation tool. This feature converts written text into spoken audio that can be synchronized with video elements, creating dynamic multimedia content. Unlike traditional voiceover recording, wideo text to speech automates the narration process, offering users a fast and cost-effective alternative to hiring voice actors or recording audio manually.

The technology behind wideo text to speech involves advanced algorithms and artificial intelligence that replicate human voice patterns and intonations. Modern TTS engines provide diverse voice profiles, accents, and languages to cater to global audiences. This makes wideo text to speech a versatile solution for producing videos that require clear, engaging narration without the need for extensive audio equipment or expertise.

Key Features of Wideo Text to Speech Tools

Text to speech capabilities integrated into the Wideo platform come with a range of features designed to optimize video creation and enhance user experience. These features combine to provide high-quality, natural-sounding audio output that aligns seamlessly with visual content.

Multiple Voice Options and Languages

Wideo text to speech tools typically offer a variety of voices differentiated by gender, tone, and regional accents. This diversity allows creators to select voices that best match their target audience or brand identity. Additionally, support for multiple languages enables the production of multilingual videos, increasing reach and accessibility.

Customization and Control

Users can customize the speech output by adjusting parameters such as speed, pitch, and volume. This control ensures that the narration fits the desired style and pacing of the video. Some tools also allow the insertion of pauses or emphasis on specific words to improve the naturalness and clarity of the speech.

Seamless Integration with Video Editing

Since the TTS feature is embedded within the Wideo platform, users can directly synchronize the generated audio with animations, transitions, and visual effects. This integration streamlines the video production workflow, eliminating the need for external audio editing software.

Text Formatting and Pronunciation Guides

Advanced wideo text to speech solutions recognize punctuation and formatting to produce accurate speech patterns. Some platforms also offer phonetic input or pronunciation correction tools, ensuring that specialized terms, brand names, or uncommon words are spoken correctly.

Benefits of Using Wideo Text to Speech in Video Production

Incorporating wideo text to speech technology offers numerous advantages that enhance both the production process and the final video quality. These benefits make TTS an indispensable tool for professionals and beginners alike.

Cost-Effective and Time-Saving

Traditional voiceover recording requires hiring voice talent, studio time, and post-production editing, which can be expensive and time-consuming. Wideo text to speech automates narration, significantly reducing costs and speeding up the production timeline.

Improved Accessibility

Videos with clear voice narration cater to audiences with visual impairments or reading difficulties. Wideo text to speech ensures that content is accessible to a wider demographic, complying with accessibility standards and enhancing user experience.

Consistent Quality and Tone

Using TTS guarantees consistent voice quality across multiple videos, avoiding variability that might occur with human narrators. This consistency helps maintain brand voice integrity and professionalism.

Flexibility for Updates and Edits

Edits to the script can be quickly reflected in the audio without the need for re-recording. This flexibility is valuable for content that requires frequent updates or localization.

How to Use Wideo Text to Speech Effectively

Maximizing the potential of wideo text to speech involves strategic planning and best practices throughout the video creation process. Proper use of TTS can elevate the quality and impact of the final product.

Prepare Clear and Concise Scripts

Effective narration starts with well-written text. Scripts should be clear, concise, and structured to match the pacing of the visuals. Avoid complex sentences and jargon that could confuse the TTS engine or the audience.

Choose Appropriate Voice and Settings

Select a voice that aligns with the video's tone and audience preferences. Experiment with speed, pitch, and pauses to achieve natural intonation and rhythm. Preview the audio to ensure clarity and engagement.

Synchronize Audio with Visual Elements

Careful synchronization between speech and video enhances comprehension and viewer retention. Utilize Wideo's timeline and editing tools to align narration with animations and scene transitions.

Test for Pronunciation and Flow

Review the generated speech for any mispronunciations or awkward phrasing. Use pronunciation guides or manual adjustments if necessary. Listening to the full video ensures a smooth and professional presentation.

Common Applications of Wideo Text to Speech

Wideo text to speech technology supports a broad range of use cases across various industries where video content plays a crucial role. This versatility contributes to its growing popularity.

- **Educational Videos:** Enhances e-learning by providing clear explanations and making content accessible to diverse learners.
- **Marketing and Advertising:** Creates engaging promotional videos with consistent brand messaging and voiceovers.
- **Corporate Training:** Facilitates internal communication and training through professional narration without the need for recording studios.
- **Social Media Content:** Quickly produces shareable videos with voiceovers to increase engagement and reach.
- **Accessibility Compliance:** Provides audio narration to meet legal requirements and support users with disabilities.

Future Trends in Text to Speech Technology for Video

The evolution of text to speech technology continues to influence video production, with emerging trends promising even more sophisticated and user-friendly solutions. These advancements will further integrate AI and machine learning to enhance voice realism and customization.

Neural and Deep Learning Voices

Next-generation TTS systems utilize neural networks to produce highly natural and expressive voices that closely mimic human speech patterns. This results in more engaging and emotionally resonant narration.

Real-Time Text to Speech Conversion

Future implementations aim to enable real-time TTS within live streaming or interactive video platforms, expanding the use cases for instant voice generation.

Enhanced Multilingual Capabilities

Advances in multilingual TTS will allow seamless switching between languages or dialects within a single video, catering to global audiences with ease.

Personalized Voice Branding

Brands will have the option to create custom synthetic voices that reflect their unique identity, providing a distinctive and consistent audio presence across all video content.

Frequently Asked Questions

What is Wideo Text to Speech?

Wideo Text to Speech is a feature offered by Wideo, an online video creation platform, that converts written text into natural-sounding voiceovers for videos, enhancing engagement and accessibility.

How accurate is the Wideo Text to Speech feature?

The Wideo Text to Speech feature uses advanced AI technology to produce clear and natural-sounding voiceovers, with high accuracy in pronunciation and intonation, making it suitable for professional video content.

Can I customize the voice in Wideo Text to Speech?

Yes, Wideo allows users to choose from multiple voice options, including different genders, accents, and languages, enabling personalized and relevant voiceovers for your videos.

Is Wideo Text to Speech suitable for multiple languages?

Absolutely, Wideo Text to Speech supports various languages, allowing users to create voiceovers in their preferred language to reach a broader audience effectively.

How do I use the Text to Speech feature in Wideo?

To use Text to Speech in Wideo, simply enter your text into the designated area in the video editor, select your preferred voice and language, and the platform will automatically generate the voiceover for your video.

Additional Resources

1. *Mastering Video Text-to-Speech Technology: A Comprehensive Guide*

This book offers an in-depth exploration of video text-to-speech (TTS) technology, covering both foundational concepts and advanced techniques. Readers will learn how to integrate TTS in multimedia projects, enhance accessibility, and create engaging video content. It also includes practical tutorials on popular TTS software and tools, making it ideal for developers and content creators alike.

2. *Text-to-Speech in Video Production: Enhancing Accessibility and Engagement*

Focused on the application of TTS in video production, this book highlights how TTS can improve accessibility for viewers with disabilities. It discusses best practices for natural-sounding speech synthesis and how to synchronize audio with video effectively. Case studies demonstrate successful implementations in educational and entertainment videos.

3. *Artificial Voices: The Future of Video Text-to-Speech*

Exploring the cutting edge of TTS technology, this book delves into artificial intelligence and deep learning advancements that are shaping the future of video narration. It examines voice cloning, emotional speech synthesis, and real-time TTS generation. The author also addresses ethical considerations and the impact of synthetic voices on media production.

4. *Creating Dynamic Videos with Text-to-Speech Software*

This practical guide helps users create dynamic video content by leveraging text-to-speech applications. It covers step-by-step workflows for various TTS platforms, tips for voice customization, and integration with video editing software. Readers will gain skills to produce professional-quality videos without recording human voiceovers.

5. *Speech Synthesis for Video Content Creators*

Designed for content creators, this book explains how speech synthesis can streamline video narration processes. It offers insights into selecting voices, adjusting speech parameters, and ensuring clarity and expressiveness in synthetic speech. Examples include tutorials on scripting and automating TTS for bulk video production.

6. *Voice AI and Text-to-Speech in Multimedia Storytelling*

This title investigates how voice AI technologies, including TTS, contribute to immersive storytelling in multimedia formats. It discusses narrative techniques enhanced by synthetic voices and the role of adaptive TTS in interactive videos. The book also covers technological challenges and solutions for achieving realism in voice synthesis.

7. *Text-to-Speech Engines for Video: Tools and Techniques*

A technical manual that reviews various TTS engines suitable for video applications, this book compares features, voice quality, and customization options. It provides guidance on API integration, real-time processing, and optimization for different video platforms. Developers will find detailed examples and code snippets to implement TTS efficiently.

8. *Accessible Video Design: Leveraging Text-to-Speech Technology*

This book emphasizes the importance of accessibility in video content through the use of text-to-speech technology. It outlines guidelines for making videos compliant with accessibility standards and enhancing user experience for people with visual impairments. The author shares practical advice on choosing voices and syncing speech with on-screen text.

9. *From Text to Voice: Innovations in Video Narration*

Highlighting recent innovations in video narration, this book explores how text-to-speech technologies are transforming content creation. Topics include multilingual TTS, voice personalization, and integration with virtual and augmented reality. Readers will discover emerging trends and tools that push the boundaries of synthetic video narration.

video text to speech: Video Text Detection Tong Lu, Shivakumara Palaiahnakote, Chew Lim Tan, Wenyin Liu, 2014-07-23 This book presents a systematic introduction to the latest developments in video text detection. Opening with a discussion of the underlying theory and a brief history of video text detection, the text proceeds to cover pre-processing and post-processing techniques, character segmentation and recognition, identification of non-English scripts, techniques for multi-modal analysis and performance evaluation. The detection of text from both natural video scenes and artificially inserted captions is examined. Various applications of the technology are also reviewed, from license plate recognition and road navigation assistance, to sports analysis and video advertising systems. Features: explains the fundamental theory in a succinct manner, supplemented with references for further reading; highlights practical techniques to help the reader understand and develop their own video text detection systems and applications;

serves as an easy-to-navigate reference, presenting the material in self-contained chapters.

video text to speech: Video Data Management and Information Retrieval Sagarmay Deb, 2005-01-01 This book combines the two important areas of research within computer technology and presents them in comprehensive, easy to understand manner. Ideal for graduates and under-graduates, as well as researchers working in either video data management or information retrieval, it takes an in depth look at many relevant topics within both video data management and information retrieval. In addition to dissecting those issues, it also provides a big picture view of each topic.

video text to speech: *Handbook of Video Databases* Borko Furht, Oge Marques, 2003-09-30 Technology has spurred the growth of huge image and video libraries, many growing into the hundreds of terabytes. As a result there is a great demand among organizations for the design of databases that can effectively support the storage, search, retrieval, and transmission of video data. Engineers and researchers in the field demand a comprehensive reference that will help them design and implement the most complex video database projects. *Handbook of Video Databases: Design and Applications* presents a thorough overview in 45 chapters from more than 100 renowned experts in the field. This book provides the tools to help overcome the problems of storage, cataloging, and retrieval, by exploring content standardization and other content classification and analysis methods. The challenge of these complex problems make this book a must-have for video database practitioners in the fields of image and video processing, computer vision, multimedia systems, data mining, and many other diverse disciplines.

video text to speech: **Multimedia Information Extraction** Mark T. Maybury, 2012-07-11 The advent of increasingly large consumer collections of audio (e.g., iTunes), imagery (e.g., Flickr), and video (e.g., YouTube) is driving a need not only for multimedia retrieval but also information extraction from and across media. Furthermore, industrial and government collections fuel requirements for stock media access, media preservation, broadcast news retrieval, identity management, and video surveillance. While significant advances have been made in language processing for information extraction from unstructured multilingual text and extraction of objects from imagery and video, these advances have been explored in largely independent research communities who have addressed extracting information from single media (e.g., text, imagery, audio). And yet users need to search for concepts across individual media, author multimedia artifacts, and perform multimedia analysis in many domains. This collection is intended to serve several purposes, including reporting the current state of the art, stimulating novel research, and encouraging cross-fertilization of distinct research disciplines. The collection and integration of a common base of intellectual material will provide an invaluable service from which to teach a future generation of cross disciplinary media scientists and engineers.

video text to speech: Generative Artificial Intelligence. World Intellectual Property Organization, 2024-07-03 In this WIPO Patent Landscape Report on Generative AI, discover the latest patent trends for GenAI with a comprehensive and up-to-date understanding of the GenAI patent landscape, alongside insights into its future applications and potential impact. The report explores patents relating to the different modes, models and industrial application areas of GenAI.

video text to speech: *Interactive Video* Riad Hammoud, 2007-01-21 This book is a groundbreaking resource that covers both algorithms and technologies of interactive videos. It presents recent research and application work for building and browsing interactive digital videos. The book deals mainly with low-level semi-automatic and full-automatic processing of the video content for intelligent human computer interaction. There is a special focus on eye tracking methods.

video text to speech: **Mining Multimedia Documents** Wahiba Ben Abdessalem Karaa, Nilanjan Dey, 2017-04-21 The information age has led to an explosion in the amount of information available to the individual and the means by which it is accessed, stored, viewed, and transferred. In particular, the growth of the internet has led to the creation of huge repositories of multimedia documents in a diverse range of scientific and professional fields, as well as the tools to extract

useful knowledge from them. Mining Multimedia Documents is a must-read for researchers, practitioners, and students working at the intersection of data mining and multimedia applications. It investigates various techniques related to mining multimedia documents based on text, image, and video features. It provides an insight into the open research problems benefitting advanced undergraduates, graduate students, researchers, scientists and practitioners in the fields of medicine, biology, production, education, government, national security and economics.

video text to speech: Discovering Psychology Telecourse Study Guide David S. Moore, 1991

video text to speech: *Computer Vision - ACCV 2024* Minsu Cho, Ivan Laptev, Du Tran, Angela Yao, Hongbin Zha, 2024-12-06 This 10-volume LNCS conference set constitutes the proceedings of the 17th Asian Conference on Computer Vision, in Hanoi, Vietnam, held during December 8-12, 2024. The 270 full papers together included in this volume were carefully reviewed and selected from 839 submissions. The conference presents and discusses new problems, solutions, and technologies in computer vision, machine learning, and related areas in artificial intelligence.

video text to speech: **Advanced Internet Based Systems and Applications** Ernesto Damiani, Kokou Yetongnon, Richard Chbeir, Albert Dipanda, 2009-04-24 In recent years, Internet-based systems and applications have become pervasive and have been the focus of many ongoing research efforts. They range from semi-structured information, to multimedia systems and applications, to P2P and ad hoc information sharing networks and service-centric systems and applications. This book presents a collection of articles from the best papers presented at the SITIS 2006 International Conference, aiming to cover recent advanced research on distributed information systems, including both theoretical and applied solutions. This volume is designed for a professional audience practitioners and researchers in industry. It is also suitable as a reference or secondary text for advanced-level students in computer science and engineering. The articles in this book are a selection of papers presented at the IMRT and WITDS tracks of the international SITIS 2006 conference. The authors were asked to revise and extend their contributions to take into account the comments and discussions made at the conference. A large number of high-quality papers were submitted to SITIS 2006, demonstrating the growing interest of the search community for Internet-Based and multimedia information systems. We would like to acknowledge the hard work and dedication of many people. Our deepest gratitude goes to the authors who contributed their work. We appreciate the diligent work of the SITIS Committee members. We are grateful for the help, support and patience of the LNCS publishing team. Finally, thanks to Iwayan Wikacsana for his invaluable help. February 2007 Ernesto Damiani Kokou Yetongnon Richard Chbeir Albert Dipanda

video text to speech: *Computer Vision - ECCV 2024* Aleš Leonardis, Elisa Ricci, Stefan Roth, Olga Russakovsky, Torsten Sattler, Gül Varol, 2024-11-26 The multi-volume set of LNCS books with volume numbers 15059 up to 15147 constitutes the refereed proceedings of the 18th European Conference on Computer Vision, ECCV 2024, held in Milan, Italy, during September 29-October 4, 2024. The 2387 papers presented in these proceedings were carefully reviewed and selected from a total of 8585 submissions. They deal with topics such as computer vision; machine learning; deep neural networks; reinforcement learning; object recognition; image classification; image processing; object detection; semantic segmentation; human pose estimation; 3d reconstruction; stereo vision; computational photography; neural networks; image coding; image reconstruction; motion estimation.

video text to speech: **AI Tools in Teaching, Learning and Research** Dr. Jangam J S Mani, Dr. Chinta Naga Manisha, 2024-04-26 This book offers insights on the use of Artificial Intelligence (AI) in Higher Education. It provides educators with a curated selection of AI Tools to enhance Teaching, Learning, Assessment, and Research practices. These tools support the creation of dynamic e-learning materials within existing Single Major Curricular frameworks for all the subjects.

video text to speech: Large Vision-Language Models Kaiyang Zhou, Ziwei Liu, Peng Gao, 2025-08-30 The rapid progress in the field of large multimodal foundation models, especially vision-language models, has dramatically transformed the landscape of machine learning, computer vision, and natural language processing. These powerful models, trained on vast amounts of

multimodal data mixed with images and text, have demonstrated remarkable capabilities in tasks ranging from image classification and object detection to visual content generation and question answering. This book provides a comprehensive and up-to-date exploration of large vision-language models, covering the key aspects of their pre-training, prompting techniques, and diverse real-world computer vision applications. It is an essential resource for researchers, practitioners, and students in the fields of computer vision, natural language processing, and artificial intelligence. Large Vision-Language Models begins by exploring the fundamentals of large vision-language models, covering architectural designs, training techniques, and dataset construction methods. It then examines prompting strategies and other adaptation methods, demonstrating how these models can be effectively fine-tuned to address a wide range of downstream tasks. The final section focuses on the application of vision-language models across various domains, including open-vocabulary object detection, 3D point cloud processing, and text-driven visual content generation and manipulation. Beyond the technical foundations, the book explores the wide-ranging applications of vision-language models (VLMs), from enhancing image recognition systems to enabling sophisticated visual content generation and facilitating more natural human-machine interactions. It also addresses key challenges in the field, such as feature alignment, scalability, data requirements, and evaluation metrics. By providing a comprehensive roadmap for both newcomers and experts, this book serves as a valuable resource for understanding the current landscape, limitations, and future directions of VLMs, ultimately contributing to the advancement of artificial intelligence.

video text to speech: *Image and Video Retrieval* Peter Enser, Yiannis Kompatsiaris, Noel E. O'Connor, Alan Smeaton, Arnold W.M. Smeulders, 2004-06-25 This book constitutes the refereed proceedings of the Third International Conference on Image and Video Retrieval, CIVR 2004, held in Dublin, Ireland in July 2004. The 31 revised full papers and 44 poster papers presented were carefully reviewed and selected from 125 submissions. The papers are organized in topical sections on image annotation and user searching, image and video retrieval algorithms, person and event identification for retrieval, content-based image and video retrieval, and user perspectives.

video text to speech: *AI-based Image and Video Coding* Wei Gao, 2025-09-20 Unlocking the future of image and video coding with AI-based Image and Video Coding: Methods, Standards, and Applications, we can explore the revolutionary impact of deep learning technologies on image and video compression. This book is a must-read for researchers, practitioners, and students eager to stay ahead of the curve in an ever-evolving field where deep learning and artificial intelligence are setting new benchmarks in coding efficiency. With an unparalleled focus on the intersection of deep learning and multimedia coding, this book offers cutting-edge insights into the latest techniques and standards driving progress in the industry. From the core principles of coding technologies to advanced topics like 3D and multimodal coding, human and machine vision-oriented compression, and compression artifacts removal, it covers all the related essentials. Special attention is given to the practical aspects of implementations, open-source projects, and standardization efforts from leading organizations like IEEE, JPEG, MPEG and MPAA. Whether you are a scholar, a professional in the multimedia industry, or a student with a foundation in computer science and electrical engineering, this book equips you with the fundamental knowledge and tools to master the latest advancements in AI-based image and video coding. You can gain a deeper understanding of how deep learning reshapes the future of image and video coding, and explore new possibilities of optimizing compression performances for both humans and machines.

video text to speech: *The Communications Handbook* Jerry D. Gibson, 2018-10-08 For more than six years, The Communications Handbook stood as the definitive, one-stop reference for the entire field. With new chapters and extensive revisions that reflect recent technological advances, the second edition is now poised to take its place on the desks of engineers, researchers, and students around the world. From fundamental theory to state-of-the-art applications, The Communications Handbook covers more areas of specialty with greater depth than any other handbook available. Telephony Communication networks Optical communications Satellite communications Wireless communications Source compression Data recording Expertly written,

skillfully presented, and masterfully compiled, The Communications Handbook provides a perfect balance of essential information, background material, technical details, and international telecommunications standards. Whether you design, implement, buy, or sell communications systems, components, or services, you'll find this to be the one resource you can turn to for fast, reliable, answers.

video text to speech: *New Trends in Multimedia and Network Information Systems* K. Choroś, A. Zgrzywa, A. Siemiński, 2008-08-21 Discusses a broad scope of subject matters including multimedia systems in their widest sense, web systems and network technologies. This monograph also includes texts which deals with traditional information systems that draw on the experience of the multimedia and network systems.

video text to speech: *Digital Video Image Quality and Perceptual Coding* H.R. Wu, K.R. Rao, 2017-12-19 The hand is quicker than the eye. In many cases, so is digital video. Maintaining image quality in bandwidth- and memory-restricted environments is quickly becoming a reality as thriving research delves ever deeper into perceptual coding techniques, which discard superfluous data that humans cannot process or detect. Surveying the topic from a Human Visual System (HVS)-based approach, *Digital Video Image Quality and Perceptual Coding* outlines the principles, metrics, and standards associated with perceptual coding, as well as the latest techniques and applications. This book is divided broadly into three parts. First, it introduces the fundamental theory, concepts, principles, and techniques underlying the field, such as the basics of compression, HVS modeling, and coding artifacts associated with current well-known techniques. The next section focuses on picture quality assessment criteria; subjective and objective methods and metrics, including vision model based digital video impairment metrics; testing procedures; and international standards regarding image quality. Finally, practical applications come into focus, including digital image and video coder designs based on the HVS as well as post-filtering, restoration, error correction, and concealment techniques. The permeation of digital images and video throughout the world cannot be understated. Nor can the importance of preserving quality while using minimal storage space, and *Digital Video Image Quality and Perceptual Coding* provides the tools necessary to accomplish this goal. Instructors and lecturers wishing to make use of this work as a textbook can download a presentation of 786 slides in PDF format organized to augment the text. accompany our book (H.R. Wu and K.R. Rao, *Digital Video Image Quality and Perceptual Coding*, CRC Press (ISBN: 0-8247-2777-0), Nov. 2005) for lecturers or instructor to use for their classes if they use the book.

video text to speech: *Advances in Image and Video Technology* Long-Wen Chang, 2006-11-29 This book constitutes the refereed proceedings of the First Pacific Rim Symposium on Image and Video Technology, PSIVT 2006, held in Hsinchu, Taiwan in December 2006. The 76 revised full papers and 58 revised poster papers cover a wide range of topics, including all aspects of video and multimedia, both technical and artistic perspectives and both theoretical and practical issues.

video text to speech: *Guide to Voice and Video over IP* Lingfen Sun, Is-Haka Mkwawa, Emmanuel Jammeh, Emmanuel Ifeachor, 2013-01-12 This book presents a review of the latest advances in speech and video compression, computer networking protocols, the assessment and monitoring of VoIP quality, and next generation network architectures for multimedia services. The book also concludes with three case studies, each presenting easy-to-follow step-by-step instructions together with challenging hands-on exercises. Features: provides illustrative worked examples and end-of-chapter problems; examines speech and video compression techniques, together with speech and video compression standards; describes the media transport protocols RTP and RTCP, as well as the VoIP signalling protocols SIP and SDP; discusses the concepts of VoIP quality of service and quality of experience; reviews next-generation networks based on the IP multimedia subsystem and mobile VoIP; presents case studies on building a VoIP system based on Asterisk, setting up a mobile VoIP system based on Open IMS and Android mobile, and analysing VoIP protocols and quality.
