william eckhardt research center: *The University of Chicago* John W. Boyer, 2024-09-06 An expanded narrative of the rich, unique history of the University of Chicago. One of the most influential institutions of higher learning in the world, the University of Chicago has a powerful and distinct identity, and its name is synonymous with intellectual rigor. With nearly 170,000 alumni living and working in more than one hundred and fifty countries, its impact is far-reaching and long-lasting. With *The University of Chicago: A History*, John W. Boyer, Dean of the College from 1992 to 2023, thoroughly engages with the history and the lived politics of the university. Boyer presents a history of a complex academic community, focusing on the nature of its academic culture and curricula, the experience of its students, its engagement with Chicago's civic community, and the resources and conditions that have enabled the university to sustain itself through decades of change. He has mined the archives, exploring the school's complex and sometimes controversial past to set myth and hearsay apart from fact. Boyer's extensive research shows that the University of Chicago's identity is profoundly interwoven with its history, and that history is unique in the annals of American higher education. After a little-known false start in the mid-nineteenth century, it achieved remarkable early successes, yet in the 1950s it faced a collapse of undergraduate enrollment, which proved fiscally debilitating for decades. Throughout, the university retained its fierce commitment to a distinctive, intense academic culture marked by intellectual merit and free debate, allowing it to rise to international acclaim. Today it maintains a strong obligation to serve the larger community through its connections to alumni, to the city of Chicago, and increasingly to its global community. Boyer's tale is filled with larger-than-life characters—John D. Rockefeller, Robert Maynard Hutchins, and many other famous figures among them—and episodes that reveal the establishment and rise of today's institution. Newly updated, this edition extends through the presidency of Robert Zimmer, whose long tenure was marked by significant developments and controversies over subjects as varied as free speech, medical inequity, and community relations.

william eckhardt research center: *Building Ideas* Jay Pridmore, 2013-07-22 Many books have been written about the University of Chicago over its 120-year history, but most of them focus on the intellectual environment, favoring its great thinkers and their many breakthroughs. Yet for the students and scholars who live and work here, the physical university—its stately buildings and beautiful grounds—forms an important part of its character. *Building Ideas: An Architectural Guide to the University of Chicago* explores the environment that has supported more than a century of exceptional thinkers. This photographic guide traces the evolution of campus architecture from the university's founding in 1890 to its plans for the twenty-first century. When William Rainey Harper, the university's first president, and the trustees decided to build a set of Gothic quadrangles, they created a visual link to European precursors and made a bold statement about the future of higher education in the United States. Since then the university has regularly commissioned forward-thinking architects to design buildings that expand—or explode—traditional ideals while redefining the contemporary campus. Full of panoramic photographs and exquisite details, *Building Ideas* features the work of architects such as Frank Lloyd Wright, Henry Ives Cobb, Holabird &

Roche, Eero Saarinen, Ludwig Mies van der Rohe, Walter Netsch, Ricardo Legorreta, Rafael Viñoly, César Pelli, Helmut Jahn, and Tod Williams Billie Tsien Architects. The guide also includes guest commentaries by prominent architects and other notable public figures. william eckhardt research center: Unity of Knowledge (in Transdisciplinary Research for Sustainability) - Volume I Gertrude Hirsch Hardon, 2008-12-31 Unity of Knowledge in Transdisciplinary Research for Sustainable Development theme is a component of Encyclopedia of Social Sciences and Humanities in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Today, there is a social need for a comprehensive unity of knowledge that would provide orientation and ensure action in the context of the complex problems of modern civilization. Based on an intellectual need for unity of knowledge, different concepts of unity of knowledge have emerged in the course of the history of ideas. The intellectual need for unity can be directed at the world, science, action or the individual. It can involve the quest for the unity of the world based on a principle that is immanent in it, the unity of science as a theoretical, methodical or epistemological unity, the unity of action as a correlation of scientific, pragmatic and moral knowledge or, finally, unity as the educational task of the individual. The concepts associated with unity of knowledge can go in two directions. The first assumes that there is a unity existing in the world that can be perceived by man. It is thought of as an order of being, i.e. an ontological unity of the plurality of phenomena, that consist in their common nature. The other direction is based on the assumption that unity is a construction of a subject, based on its cognitive principles and structures. Thus it is not something that can be discovered as an existing objective order, and is instead subjective. These two volumes present some aspects of Unity of Knowledge in Transdisciplinary Research for Sustainable Development in three parts. The purpose of the first part is to trace back the core ideas in transdisciplinary thinking in the history of western philosophy and science, to locate socially the concerns of transdisciplinary research and to give an account of the development of transdisciplinary research. The second group of chapters deals with methodological and management problems related to transdisciplinary research with regard to problem identification and structuring of research questions, with knowledge integration in problem investigation as well as with evaluation. An outline of the institutional measures and transformations to enable and support transdisciplinary research is given in the third part. Institutional strategies build on organizational arrangements and links across academic institutions in education and research, on networks between science and society for joint knowledge production in temporally limited settings of research programs or projects, but they also set up new institutions, such as centers for advanced studies, national offices, agencies and networks. These two volumes are aimed at a wide spectrum of audiences: University and College Students, Educators, Research Personnel and all those concerned with sustainable development.
