**wildlife conservation society membership discount: An Introduction to Zoo Biology and Management** Paul A. Rees, 2011-03-29 This book is intended as an introductory text for students studying a wide range of courses concerned with animal management, zoo biology and wildlife conservation, and should also be useful to zookeepers and other zoo professionals. It is divided into three parts. Part 1 considers the function of zoos, their history, how zoos are managed, ethics, zoo

legislation and wildlife conservation law. Part 2 discusses the design of zoos and zoo exhibits, animal nutrition, reproduction, animal behaviour (including enrichment and training), animal welfare, veterinary care, animal handling and transportation. Finally, Part 3 discusses captive breeding programmes, genetics, population biology, record keeping, and the educational role of zoos, including a consideration of visitor behaviour. It concludes with a discussion of the role of zoos in the conservation of species in the wild and in species reintroductions. This book takes an international perspective and includes a wide range of examples of the operation of zoos and breeding programmes particularly in the UK, Europe, North America and Australasia. **wildlife conservation society membership discount: This Land Is Not For Sale** Lotte Meinert, Susan Reynolds Whyte, 2023-01-13 Although violent conflict has declined in northern Uganda, tensions and mistrust concerning land have increased. Residents try to deal with acquisitions by investors and exclusions from forests and wildlife reserves. Land wrangles among neighbours and relatives are widespread. The growing commodification of land challenges ideals of entrustment for future generations. Using extended case studies, collaborating researchers analyze the principles and practices that shape access to land. Contributors examine the multiplicity of land claims, the nature of transactions and the management of conflicts. They show how access to land is governed through intimate relations of gender, generation and belonging.

**wildlife conservation society membership discount: Ecology, Conservation and Management of Wild Pigs and Peccaries** Mario Melletti, Erik Meijaard, 2017-11-23 Wild pigs inhabit vast areas in Europe, Southern Asia and Africa, and have been introduced in North and South America, while feral pigs are widespread in Australia and New Zealand. Many wild pig species are threatened with extinction, but Eurasian wild boar populations, however, are increasing in many regions. Covering all wild pig and peccary species, the Suidae and Tayassuidae families, this comprehensive review presents new information about the evolution, taxonomy and domestication of wild pigs and peccaries alongside novel case studies on conservation activities and management. One hundred leading experts from twenty five countries synthesise understanding of this group of species; discussing current research, and gaps in the knowledge of researchers, conservation biologists, zoologists, wildlife managers and students. This beautifully illustrated reference includes the long history of interactions between wild pigs and humans, the benefits some species have brought us and their role and impact on natural ecosystems.

**wildlife conservation society membership discount: Beyond Borders** Brian Doherty, Timothy Doyle, 2013-10-18 Globalisation is about transnational politics. While nation-state governments increasingly struggle with this new politics, which moves beneath, between and beyond national borders, others entities like transnational corporations have flourished. But it is not just business which increasingly bypasses these traditional boundaries. Environmental groups are also moving through this transnational space, and their politics are defined by such qualities as fluidity, ambiguity and rapid changes in identity, mission and structure. In this book, the politics of environmental movements are presented as particularly salient examples of these new phenomena. Drawing on fieldwork from Europe, Asia, America, Africa and the Middle East, the contributors address a range of trans-national processes: efforts to construct common agendas transnationally; the diffusion of new repertoires of environmental protest; the role of environmental groups in the construction of new modes of environmental governance; how neo-liberalism affects local environmental activism; evidence of transnational influences and pressures on environmental politics in repressive regimes; and the dilemmas of defining questions of environmental justice and post-colonial environmental politics without suppressing the differences between environmentalism in different countries.

Sections cover historical information, the main biogeographic patterns, evolutionary trends, conservational efforts, and cultural significance. Status and distribution are fully updated for all 12 countries where snow leopards occur. Other sections describe established and emerging threats, including human-wildlife conflict, illegal trade, infrastructure development, and climate change along with conservation solutions used to address these threats. **wildlife conservation society membership discount: Evidence-based Conservation** Terry C. H. Sunderland, Jeffrey Sayer, Minh Ha Hoang, 2013 The basis of this book is the disparity between the science of conservation biology and the design and execution of biodiversity conservation projects in the field. The book argues for an 'evidence-based approach', drawing information from fifteen projects in the Lower Mekong regions, with the aim of allowing more effective integrated conservation projects.

**wildlife conservation society membership discount: Zoos And Animal Welfare** Christine Van Tuyl, 2009-06-26 A trip to the zoo, when very young, is an important part of curriculum in America, but as we mature, we learn that zoos represent captivity, and often produce undesired, unhealthy results on the inhabitants. This volume asks students to think critically about Earth's animals, and how we treat them. Essays discuss zoos and the treatment of animals in captivity, covering the role of zoos in education and ensuring the survival of certain species, the problem of surplus animals, and how elephants react to captivity.

**wildlife conservation society membership discount: To Purge the Forest by Force: Organized violence against Batwa in Kahuzi-Biega National Park** Robert Flummerfelt, 2022-04-05 The Kahuzi-Biega National Park in the Democratic Republic of the Congo, a protected area and UNESCO World Heritage site that has received funding and material support from the German and US governments among other international supporters, has long been celebrated as one of the most biodiverse places on the planet. However, park authorities there have engaged in a three-year program of violent forced expulsions targeting the original human inhabitants of the park—the indigenous Batwa of Kahuzi-Biega, who are among the most marginalized groups in the country. This report, *To Purge the Forest by Force*, documents the highly organized, grievous and widespread human rights abuses jointly carried out by park guards and Congolese Army soldiers against Batwa between 2019 and 2021. In October 2018, after four decades of broken promises of resettlement, reparations and justice from the Congolese government and other stakeholders, segments of Batwa communities returned to the park, rebuilding villages on their ancestral lands. Their return was met with swift and devastating violence by park authorities. The report presents evidence of park guards and soldiers conducting three large-scale operations between 2019-2021, targeting at least seven highly populated Batwa-inhabited villages inside the park, along with numerous smaller-scale evictions and acts of repression. Among other abuses, dozens of Batwa have been killed, injured, arbitrarily detained or subjected to violent group rape, in what amounts to a systematic campaign of violence designed to terrorize Batwa and drive them out of the park. These large-scale operations are illustrative flashpoints in the decades-long process of marginalization and brutalization visited upon Batwa in the name of conservation. Ongoing violence is rooted in the original expulsion from their ancestral homeland to pave the way for the creation of the park in the 1970s, forcing an already marginalized indigenous community into decades of grinding impoverishment, landlessness

and displacement. The story of the Batwa of Kahuzi-Biega is not an isolated incident. Instead, it is emblematic of the widespread, systemic violence inherent in the rigidly colonial conservation model widely used in East and Central Africa, funded and facilitated by a network of international entities, with deadly consequences for indigenous peoples and local communities living in the vicinity of protected areas. The tragic events detailed in this report have been made possible by a culture of impunity that devalues indigenous life in service of a highly militarized approach inherent in the 'fortress conservation' model, excluding the land's original inhabitants in violation of international law.

**wildlife conservation society membership discount:** **Wild Lives** Kathleen Weidner Zoehfeld, 2014-06-30 From the moment the very first animals-two small, bedraggled prairie dogs-arrived at the Bronx Zoo in 1899, history was being made. Zookeeping has steadily been evolving over the years: Today, animals that would once have been kept in iron cages roam freely in habitats similar to real prairies, jungles, and forests. Wild Lives takes readers through a century of zookeeping at one of the most-beloved zoos in the world, and shares what zoologists have learned over the years about keeping wild animals.

**wildlife conservation society membership discount:** Exploiting the Wilderness Greg L. Warchol, 2017-11 Illegally harvested ivory and endangered plants, mammals, reptiles, birds, and even insects are easily found for sale throughout East and Southern Africa. And this is just one part of the multi-billion-dollar illegal global trade in wildlife. Wildlife is an important and even vital asset for both intrinsic and economic reasons. Yet it is illegally exploited on a massive scale to the point where some species now risk extinction. Exploiting the Wilderness provides a concise overview of

this shameful business, describing some of the main species being exploited and examining select wildlife whose survival is imperiled due to heavy pressure from poachers to meet consumer demand. Greg Warchol draws on his firsthand experience and research in Africa to examine the structure and operation of the illegal trade in wildlife. He identifies the participants as well as their motivations and operations, and explains the behavior of poachers, traffickers, and consumers of illegally obtained goods. He concludes with a description of legislative and law enforcement efforts to control and prevent wildlife exploitation along with a number of contemporary conservation initiatives designed to improve the ability of rangers to protect wildlife.

**wildlife conservation society membership discount: Dictionary of Zoo Biology and Animal Management** Paul A. Rees, 2013-09-23 This dictionary is intended as a guide to the terminology used in a wide range of animal-related programmes of study including agriculture, animal care, animal management, animal production, animal welfare, veterinary nursing, wildlife conservation and zoo biology. In total it contains over 5,300 entries. It contains a wide range of terms used in the fields of veterinary science, physiology and zoology, as students whose primary interests are animal welfare or zoo biology also need to have some understanding of disease, how animal bodies function and how animals are classified. It also contains some legal terms, and reference to some legal cases, to help students understand how the protection, use and conservation of animals is regulated by the law. Some people, famous animals, literature and films have influenced the way we think about, and behave towards, animals. For this reason, the book includes references to important books about animals, famous animals who have starred in films or been the subject of scientific studies, along with short biographies of famous scientists and others who have studied animals or established conservation or animal welfare organisations.

In this forward-thinking work, Paul Jepson and Richard Ladle cover all aspects of modern conservation to provide a fascinating look into how we're fighting for the earth's species and habitats, as well as details on where conservation is heading, and how we can all contribute.
