Windows Server 2022 Editions and Licensing Models

Windows Server 2022 comes in multiple editions designed to meet the needs of different business sizes and workloads. Choosing the correct edition and licensing model is crucial for compliance and cost efficiency. The primary editions include Standard, Datacenter, and Essentials, each tailored with specific features and licensing terms.

Standard Edition

The Standard edition is ideal for businesses that require basic server functionality with limited virtualization rights. It supports up to two virtual machines (VMs) or two Hyper-V containers per license. This edition is best suited for physical or minimally virtualized environments where advanced features are not necessary.

Datacenter Edition

Datacenter edition caters to highly virtualized and software-defined datacenter environments. It provides unlimited virtualization rights, allowing an unlimited number of Windows Server instances on the licensed cores. This edition is preferred by organizations running extensive virtual machine deployments or private cloud infrastructures.

Essentials Edition

Essentials edition targets small businesses with up to 25 users and 50 devices. It includes simplified licensing with no core-based requirements and is limited to one physical or virtual server. While it offers fewer features compared to Standard and Datacenter editions, it suits small-scale deployments with straightforward needs.

Overview of Licensing Models

Windows Server 2022 licensing primarily follows a core-based model, except for the Essentials edition. Licensing is based on the number of physical processor cores in the server, with a minimum purchase requirement. Understanding the editions and their licensing models helps organizations select the right fit for their infrastructure.

Core-Based Licensing Explained

Core-based licensing is the foundation of Windows Server 2022 licensing for Standard and Datacenter editions. This model requires customers to license all physical cores on the server. It ensures that licensing aligns with the server's processing power, offering flexibility and scalability.

Minimum Core Requirements

Each physical processor must be licensed with a minimum of 8 cores, and each server requires a minimum of 16 cores to be licensed regardless of actual core count. This rule applies even if the server has fewer than 16 cores, ensuring a baseline licensing cost.

Core License Packs

Licenses are sold in packs of two cores. Customers must purchase enough two-core packs to cover all physical cores on the server. For example, a server with 12 cores requires six two-core license packs to meet the minimum 16-core licensing requirement.

Licensing Scenarios

Core-based licensing adapts to different hardware configurations. Whether a server has a few high-performance cores or many smaller cores, licensing costs scale accordingly. Properly counting cores

and purchasing the correct number of licenses is vital for compliance.

Client Access Licenses (CALs) Overview

In addition to core licenses, Windows Server 2022 requires Client Access Licenses (CALs) for users or devices that access the server software. CALs are separate from the server license and must be acquired for each user or device connecting to the server.

User CALs vs. Device CALs

Windows Server CALs are available in two types: User CALs and Device CALs. User CALs permit a single user to access the server from multiple devices, while Device CALs allow multiple users to access the server from a single device. Organizations should choose the CAL type that best fits their access patterns.

Remote Desktop Services (RDS) CALs

If Remote Desktop Services are used, additional RDS CALs are required. These licenses are necessary for each user or device connecting to a Remote Desktop Session Host server. RDS CALs are distinct from standard Windows Server CALs and must be purchased separately.

CAL Licensing Compliance

Ensuring proper CAL licensing is critical to avoid legal and financial risks. Organizations should maintain accurate records of CAL purchases and assignments, especially in environments with dynamic access requirements.

Virtualization Rights and Licensing

Windows Server 2022 offers specific virtualization rights based on the edition licensed. These rights determine how many virtual instances of Windows Server can run on a licensed physical server without additional licensing costs.

Standard Edition Virtualization Rights

The Standard edition provides licensing for up to two virtual machines per license, with the requirement that all physical cores be licensed. If more virtual machines are needed, additional licenses must be purchased in increments of the entire physical core count.

Datacenter Edition Virtualization Rights

Datacenter edition provides unlimited virtualization rights, allowing unlimited virtual instances on the licensed physical server. This makes it cost-effective for environments with high-density virtualization or private clouds.

Licensing for Hyper-V Containers

Windows Server 2022 also supports licensing for Hyper-V containers. Standard edition allows two Hyper-V containers per license, while Datacenter edition permits unlimited containers. Licensing containers alongside virtual machines requires careful planning to ensure compliance.

Licensing for Hybrid and Cloud Environments

Modern IT infrastructures often involve hybrid setups combining on-premises servers with cloud services. Windows Server 2022 licensing accommodates these scenarios with flexible options and benefits for hybrid cloud deployments.

Azure Hybrid Benefit

The Azure Hybrid Benefit enables organizations with active Software Assurance to use existing Windows Server licenses to save on Azure virtual machine costs. This benefit applies to both Standard and Datacenter editions and helps optimize licensing expenses in cloud environments.

Licensing in Multi-Cloud Environments

Windows Server 2022 licenses are generally tied to physical hardware or subscription models. When deploying across multiple cloud providers, organizations must review licensing agreements to ensure compliance and avoid double licensing.

Subscription Licensing Options

Microsoft offers subscription-based licensing for Windows Server 2022 through Azure and other cloud platforms. Subscriptions provide flexibility for short-term or scalable workloads without upfront licensing investment.

Software Assurance and Additional Benefits

Software Assurance (SA) is a comprehensive maintenance program that offers additional rights and benefits to Windows Server 2022 license holders. It enhances licensing value through support, updates, and flexible deployment options.

Rights to New Versions

Software Assurance grants rights to new software versions released during the coverage period. This ensures organizations stay current with the latest Windows Server features and security improvements without additional license purchases.

License Mobility and Failover Rights

SA provides license mobility rights, enabling licenses to be reassigned or moved between servers or cloud environments. It also grants extended failover rights, allowing temporary failover servers to run without additional licenses in disaster recovery scenarios.

Training and Support

Software Assurance includes access to training resources and technical support, helping IT staff manage Windows Server 2022 deployments more effectively. These benefits contribute to reducing downtime and enhancing operational efficiency.

Summary of Software Assurance Benefits

- Free version upgrades
- License mobility across servers and cloud
- Disaster recovery rights
- Access to training and support services

Administrator's Guide Serdar Hakan DÜZGÖREN, Plan your software license Choose a license server model, select network servers, and check the system requirements for Network License Manager. Overview of license types Administrators manage three types of licenses, according to the subscription type. These license types are authenticated differently. Named user licenses, based on the customer's Autodesk Account, are automatically authenticated when the customer first runs a product after signing in to Autodesk Account. Standalone licenses are tied to specific devices and use serial numbers. When customers first run the product, standalone licenses are authenticated either silently by Autodesk servers or when customers are prompted to enter a serial number. Network licenses, managed with Network License Manager (NLM) software, are authenticated by pre-configured network license servers. Sometimes, customers may be asked to give license server information when they first run a product. You can identify your license type for each product in the Products and Services section of Autodesk Account.
